

PANELS, CUT TO SIZE

- **Cut to size panels** for fillers, plant-on finished ends or otherwise may be ordered from and stocked CabParts sheet goods or from special order materials.
- Minimum **width** 3" — minimum **height** is 10"
- In line item portion of **Order Form, Section 5**, enter the item type (see below), then enter your dimensions in columns to the right: width, height and depth. Depth may be 3/4", or 5/8" if available.
- Specify edgeband type, thickness, material, and profile in comment section. Use **E** options or note special order items. For example: "3mm unfinished cherry, radius edges" (for melamine, MDF or veneer ply panel **FPAN**) or, to match door panels: "SFP, white oak, E-5, S" (wood door/species/outside/inside profiles **DPAN**)
- To specify which edges you wish to have banded (**FPAN**) or profiled (**DPAN**), check the variables columns **A, B, C,** and/or **D**, using the diagram to the left. Always specify edges to be banded by reference to the **face** of the panel (regardless of whether it is a left end, right end, etc).
- If edgebanded, customer must specify edges to be banded and the edgeband selected:
- Standard: Grain runs vertically, with the "Height".

- For Flat Panels, Item Type is **FPAN**.
  - Add **-C** to match case material (e.g. **FPAN-C**) or
  - Add **-X** to match exterior/finish/door material
- To match 5-piece wooden doors, Item Type is **DPAN**.

EXAMPLE SHOWN WITH ALL EDGES EDGEBANDED (A,B,C,D)
