

Web Order Presets and Individual Cabinet Variables

The following is a listing of the **presets** available in both the FasTrack and Complete catalogs in CabParts® online ordering system. The presets are universal defaults you can set regardless of the catalog defaults. They are normally entered prior to the individual line items and will apply to all of the cabinets entered in the later line items.

They can also be set after individual line items are entered, but **BE AWARE** that they will overwrite all of those individual line-item variables entered previously, including those entered by way of the configurator/editor.

The variable set last will overwrite the same variable set earlier. While altering them is a good way to try out different case materials, etc., CabParts® strongly suggests giving them careful consideration before entering your final order line items.

NOTE: These variables are also available for **individual cabinets/line-item entries**. Click on the configurator/editor button just to the right of the Price displayed for each line item. You will be taken to a 3D rotatable display of the cabinet and an opportunity to set any of these variables, if available, for this item alone. Saving the changes (which will override the previous universal Preset defaults for that unit) will also calculate the new price for the item.

WEB ORDER PRESETS & VARIABLES AVAILABLE

1 Case material Type

2 Case material

3 Case front EB material type

4 Case front EB material

5 Shelf edgeband material type

6 Shelf edgeband material

- 83 Holes Only (No Hinge Hardware)
- 84 No Hinge or Holes

85 Hinge type

86 Blind hinge type

87 Diagonal corner hinge type

88 Hinge Placement

Not all presets are available all times, depending on the settings of prior variables. For example, you will not see drawer box material or construction options if you select "Box Not Included" in the Drawer Box Options. Also, the order may be slightly different, depending on your location in the entry process.
